# Installation manual for the PetSoft S2 GPS tracker version for the cigarette lighter socket

*(abridged version v. 1.01)*

Tracker: S2 with cigarette lighter plug

Kit: Standard Ez

## Basic recommendations:

- GPS tracker power supply connected to a functioning cigarette lighter socket
- No **metal elements** above the GPS tracker
- GPS tracker positioned with the sticker labelled **“THIS SIDE UP”** facing upwards (open sky) **(important)**
- Protect from moisture – the casing is not waterproof.
- Do not attach the GPS tracker to metal parts of the vehicle body.

## Installation of the GPS tracker in the vehicle – cable connection

To correctly install the PetSoft S2 tracker in the vehicle, you should:

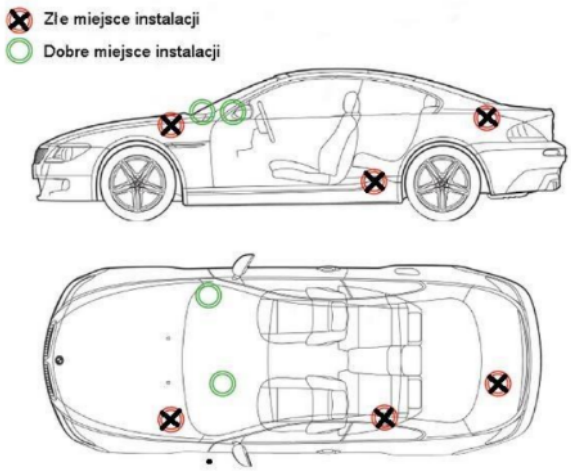

- Place the tracker in a dry area of the car (preferably on the dashboard) with the sticker showing the serial number facing up
- Plug the connector into the cigarette lighter socket

## Description of the meaning of the LEDs on the casing

A correctly installed GPS tracker indicates its operation with LEDs. The blue LED must be continuously lit, which means GPS satellites are visible. The red LED must flash every 2 seconds, which means the vehicle’s position signal is being sent to the server. Any other behaviour of the LEDs indicates incorrect operation of the GPS tracker.

## Start-up

To start the device, connect the power supply. Then log in to your Monitoring-GPS.net account and check the visibility of the vehicle on the map.
